

What are...properties of functors?

Or: Preserving diagrams

Functors preserve diagrams

- ▶ **Functor** $F: C \rightarrow D$
- ▶ F **preserves** commutative diagrams
- ▶ This is crucial and the **main point** of functors

Injective

$$Z \begin{array}{c} \xrightarrow{g_1} \\ \xrightarrow{g_2} \end{array} X \xrightarrow{f} Y$$

- ▶ A functor F is **faithful** if

$$F: \text{hom}_C(X, Y) \xrightarrow{f \mapsto F(f)} \text{hom}_{F(C)}(F(X), F(Y)) \text{ is injective}$$

- ▶ Faithful \Leftarrow monic in CAT but $\not\Rightarrow$ **\Rightarrow also needs injective on objects**

- ▶ **Example** Forget: $\mathbb{K}\text{VECT} \rightarrow \text{SET}$ is faithful

Surjective

$$X \xrightarrow{f} Y \begin{array}{c} \xrightarrow{g_1} \\ \xrightarrow{g_2} \end{array} Z$$

- ▶ A functor F is **full** if

$$F: \text{hom}_C(X, Y) \xrightarrow{f \mapsto F(f)} \text{hom}_{F(C)}(F(X), F(Y)) \text{ is surjective}$$

- ▶ Full \Rightarrow epic in CAT but \nLeftarrow I do not know any good characterization of \Leftarrow
- ▶ **Example** Forget: $\mathbb{K}\text{VECT} \rightarrow \text{SET}$ is not full

For completeness: A list of properties

Any functor F satisfies:

- ▶ F preserves commutative diagrams
 - ▶ F preserves identities ($f = id \Rightarrow F(f) = id$)
 - ▶ F preserves isomorphisms ($f \text{ iso} \Rightarrow F(f) \text{ iso}$)
-

Some functors F satisfy:

- ▶ F is faithful
- ▶ F is an embedding (= faithful and injective on objects)
- ▶ F is full
- ▶ F is iso (= fully faithful and bijective on objects)
- ▶ F reflects identities ($F(f) = id \Rightarrow f = id$)
- ▶ F reflects isomorphisms ($F(f) \text{ iso} \Rightarrow f \text{ iso}$)
- ▶ Many more that we will meet

Examples of functors

- ▶ Forget: $\mathbb{K}\text{VECT} \rightarrow \text{SET}$ is faithful, but not full or an embedding
- ▶ Powerset: $\text{SET} \rightarrow \text{SET}$ is an embedding, but not full
- ▶ Demetrization: $\text{MET}_c \rightarrow \text{TOP}$ is fully faithful, but not an embedding
- ▶ Discrete topology D : $\text{SET} \rightarrow \text{TOP}$ is a full embedding

- ▶ Indiscrete topology I : $\text{SET} \rightarrow \text{TOP}$ is a full embedding
- ▶ Inclusion functor: $\mathbb{Z}\text{MOD} \rightarrow \text{GROUP}$ is a full embedding
- ▶ Many more that we will meet

Thank you for your attention!

I hope that was of some help.
